

**Gayatri Vidya Parishad College of Engineering for Women**  
**(Autonomous)**  
**(Affiliated to Andhra University, Visakhapatnam)**  
**Madhurawada, Visakhapatnam**

**II B.Tech. - I Semester Regular Examinations, Nov – 2025**

**PYTHON PROGRAMING - 24CT11RC06**

**(EEE Branch)**

**Scheme of Valuation**

Q No	Question
<b>UNIT-I</b>	
1(a)	<b>Applications of Python in different domains (7M)</b> <ul style="list-style-type: none"> <li>• Introduction to Python (1M)</li> <li>• Explanation of multiple domains such as: <ul style="list-style-type: none"> <li>◦ Web development (1M)</li> <li>◦ Data Science &amp; Analytics (1M)</li> <li>◦ AI/ML (1M)</li> <li>◦ Automation/Scripting (1M)</li> <li>◦ Scientific computing / IoT / Cybersecurity etc. (1M)</li> </ul> </li> <li>• Conclusion (1M)</li> </ul>
1 (b)	<b>Input &amp; Output statements + Program to add two numbers (7M)</b> <ul style="list-style-type: none"> <li>• Definition of input statement (1M)</li> <li>• Definition of output/print statement (1M)</li> <li>• Explanation of syntax of input() (1M)</li> <li>• Python program for adding two numbers (3M)</li> <li>• Correct output or explanation (1M)</li> </ul>
2(a)	<b>Historical development &amp; necessity of Python (7M)</b> <ul style="list-style-type: none"> <li>• Origin &amp; creation by Guido van Rossum (2M)</li> <li>• Key milestones/version evolution (2M)</li> <li>• Necessity: simplicity, readability, portability, libraries, etc. (3M)</li> </ul>
2(b)	<b>Indentation concept &amp; example (7M)</b> <ul style="list-style-type: none"> <li>• Definition of indentation (2M)</li> <li>• Significance in Python (2M)</li> <li>• Correct example program showing indentation (3M)</li> </ul>
<b>UNIT-II</b>	
3(a)	<b>Types of Python operators (7M)</b> <ul style="list-style-type: none"> <li>• Listing operators: Arithmetic, Relational, Logical, Bitwise, Assignment, Membership, Identity (2M)</li> <li>• Any 4 operators explained with examples (4M)</li> <li>• Conclusion/summary (1M)</li> </ul>
3(b)	<b>Loops + Factorial using while loop (7M)</b> <ul style="list-style-type: none"> <li>• Definition of loops (1M)</li> <li>• Types of loops: for, while (1M)</li> <li>• Explanation of while loop (1M)</li> <li>• Factorial program using while loop (3M)</li> <li>• Correct output or explanation (1M)</li> </ul>
4(a)	<b>Conditional Statements + program (7M)</b> <ul style="list-style-type: none"> <li>• Definition of conditional statements (2M)</li> <li>• Syntax of if–elif–else (2M)</li> <li>• Program to categorize number (positive/negative/zero) (3M)</li> </ul>

<b>4(b)</b>	<b>Membership &amp; Identity operators (7M)</b> <ul style="list-style-type: none"> <li>• Definition of membership operator (in, not in) (2M)</li> <li>• Examples (1M)</li> <li>• Definition of identity operator (is, is not) (2M)</li> <li>• Examples (2M)</li> </ul>
<b>UNIT-III</b>	
<b>5(a)</b>	<b>Slicing &amp; Indexing on lists and strings (7M)</b> <ul style="list-style-type: none"> <li>• Definition of indexing (1M)</li> <li>• Examples of positive &amp; negative indexing (2M)</li> <li>• Definition of slicing (1M)</li> <li>• Slicing examples on strings and lists (3M)</li> </ul>
<b>5(b)</b>	<b>Dictionary operations (7M)</b> <ul style="list-style-type: none"> <li>• Adding key-value pair (2M)</li> <li>• Updating value (2M)</li> <li>• Deleting key-value pair (using del/pop/popitem) (2M)</li> <li>• Example programs (1M)</li> </ul>
<b>6(a)</b>	<b>Advanced Data Structures (7M)</b> <ul style="list-style-type: none"> <li>• Explanation of any 3-4 structures: tuple, set, dictionary, stack, queue, deque, heap, etc. (5M)</li> <li>• Examples (2M)</li> </ul>
<b>6(b)</b>	<b>Comprehension + list &amp; set examples (7M)</b> <ul style="list-style-type: none"> <li>• Definition of comprehension (2M)</li> <li>• List comprehension example (2M)</li> <li>• Set comprehension example (2M)</li> <li>• Explanation (1M)</li> </ul>
<b>UNIT-IV</b>	
<b>7(a)</b>	<b>Types of function arguments (7M)</b> <ul style="list-style-type: none"> <li>• Explanation of: <ul style="list-style-type: none"> <li>◦ Positional arguments</li> <li>◦ Keyword arguments</li> <li>◦ Default arguments</li> <li>◦ Variable-length (*args)</li> <li>◦ Keyword variable-length (**kwargs)</li> </ul> (5M) </li> <li>• Examples (2M)</li> </ul>
<b>7(b)</b>	<b>Creating &amp; importing modules (7M)</b> <ul style="list-style-type: none"> <li>• Definition of module (1M)</li> <li>• Creating a simple module (2M)</li> <li>• Importing module: import, from-import (2M)</li> <li>• Example (2M)</li> </ul>
<b>8(a)</b>	<b>Lambda function + filter() example (7M)</b> <ul style="list-style-type: none"> <li>• Definition of lambda function (2M)</li> <li>• Syntax (1M)</li> <li>• Explanation of filter() (2M)</li> <li>• Correct example using lambda + filter (2M)</li> </ul>
<b>8(b)</b>	<b>PIP: installation &amp; management (7M)</b> <ul style="list-style-type: none"> <li>• Definition of PIP (1M)</li> <li>• Commands: install, uninstall, list, show (3-4M)</li> <li>• Explanation of package management (2M)</li> </ul>

UNIT-V	
9(a)	<b>Classes &amp; objects + program (7M)</b> <ul style="list-style-type: none"> <li>• Definition of class (1M)</li> <li>• Definition of object (1M)</li> <li>• Syntax and explanation (1M)</li> <li>• Program defining class + creating objects (3M)</li> <li>• Output/explanation (1M)</li> </ul>
9(b)	<b>Exception handling: try-except-finally (7M)</b> <ul style="list-style-type: none"> <li>• Concept of exceptions (1M)</li> <li>• Explanation of try block (1M)</li> <li>• Explanation of except block (1M)</li> <li>• Explanation of finally block (1-2M)</li> <li>• Example program (2M)</li> </ul>
10(a)	<b>Inheritance &amp; types (7M)</b> <ul style="list-style-type: none"> <li>• Definition of inheritance (2M)</li> <li>• Types (3M total)</li> <li>• Any example (2M)</li> </ul>
10(b)	<b>File handling operations (7M)</b> <ul style="list-style-type: none"> <li>• Explanation of open(), read(), write(), close() (4M)</li> <li>• Modes of opening files: r, w, a, r+, w+, a+ (2M)</li> <li>• Example program (1M)</li> </ul>
